Research Scholar, Ph.D. In Education,

Sri Satya Sai University of Technology & Medical Sciences, Sehore, M.P.

ABSTRACT

In order to reach one's full potential, establish a fair and equal society, and make strides toward national growth, education is crucial. Achieving and maintaining worldwide leadership in areas like as economic development, social justice and equality, scientific progress, national integration, and cultural preservation hinges on making a high-quality education available to all citizens. The best way to ensure that our country's tremendous abilities and resources are put to good use for the benefit of its citizens, its society, its nation, and the world at large is to ensure that all citizens have access to a high-quality education. Based on recommendations from an expert group chaired by Dr. Kasturirangan, the former chairman of the Indian Space Research Organization, the Indian government has implemented a new education plan (ISRO). In this post, we will compare the current higher education system to the many new plans that have been introduced. The potential benefits of new technologies and the effects of NEP 2020 on India's education system are discussed. At the conclusion, several suggestions are provided about how to best put it into practice so that its aims might be realized.
