A STUDY OF ONLINE EDUCATION SYSTEM IN INDIA

REETA K GHORPADE

Research Scholar, Department of English,
Dr. A.P.J. Abdul Kalam University, Indore M.P., India.

ABSTRACT

India used a schooling method that has been in use for many years. But owing to the fast-paced development of educational needs and the imposition of a global education standard, the Indian education system is being forced to undergo major transformation. In the field of information technology and related services, India has become a world powerhouse in recent years. India has a huge youth population, making distance learning a crucial component of the country's educational system. It's essential for educating such a large population, since without it, it would be difficult to do so. India is lagging behind other countries in its embrace of online learning. Educators and students in higher education must be provided with the tools they need to become digitally literate in order to bridge the digital divide and harness the potential of information and communication technologies to further their personal development and empowerment via learning. To make up for the lack of qualified teachers in India's outlying areas, more and more people are turning to online education. Live online tutoring, live streaming movies, and virtual classrooms are all examples of helpful online learning possibilities. Therefore, many individuals think that internet education can effectively replace organised classroom teaching. Computers may help professors in large lecture halls analyse their students' progress. Increases in access to digital learning have led to increases in literacy rates throughout India's vast population.
