A STUDY OF CHALLENGES IN MANAGEMENT EDUCATION IN INDIA

SYED AHMED MOIN QUADRI

Research Scholar, Department of Management,
Sri Satya Sai University of Technology & Medical Sciences, Sehore, M.P, India.

ABSTRACT

The majority of management training across the world is based on contextual analysis, and most management professors have backgrounds in both industry and the business world. Understudies who already have some experience in the industry might benefit from their influence and guidance. Students can be confident in their own abilities to learn and apply new management skills thanks to this type of instruction. Students will be able to make connections between theoretical concepts and real-world data. Undergraduates with this kind of administrative training will be well-prepared to make an immediate impact in the commercial sector. They may modify their understanding in accordance with industry segments, departments, and even entire industries. However, while looking at administrative training in India, it becomes clear that the focus is on the teachers rather than the students. No effort has been made to accommodate the wishes of the trainees. It doesn't accommodate students in an industry that meets the needs of businesses, therefore there's a huge chasm between the commercial and academic communities.
