ABSTRACT

In medieval Bengal, agriculture was the main source of employment. Since a significant portion of the local populace depended on it for their livelihood, it was crucial to Bengal's economic structure. Rich silt and clay from the region's drainage system were deposited, creating fertile soil that was sufficient for growing grains and other related crops like rice, wheat, sugarcane, mustard, cotton, silk, indigo, ginger, long pepper, turmeric, betel nut, radish, pulses, and lentils, among others. In this article, historical analysis on production of commercial commodities has been discussed.

Keywords: Production, Commercial, Commodities.
